Assessment and Control Techniques for Invertebrate Pest Animals

This Workshop includes many field activities such as trapping, using remote cameras, warren destruction, site visits and guest speakers.

An additional unit can be completed online, which combined with the workshop covers the requirements for the Commercial Operators Licence (Vermin destroyers/avicides endorsement).

Revegetation Techniques

Why revegetate? Revegetation helps to:

• Conserve Biodiversity
• Create buffers and enriches native plant communities and wildlife habitat
• Reduces soil and water loss and degradation

This hands-on workshop explores revegetation techniques and weed control methods.

Agvet Chemical Users Course and 1080 Training

This course is the industry standard for training in chemical use, storage and handling. The course provides the required training for many Industry Quality Assurance Programs and is necessary to apply for the Victorian Agricultural Chemical Users Permit (an ACUP is required for users of Schedule 7 and other Restricted Chemical Products).

Core Basics

Core units on Occupational Health and Safety (OHS) and environmentally sustainable work practices will be imbedded in all workshops.

In addition there will be a short workshop to cover sections more thoroughly.
Assessing Land and Water Ecosystems

In this practical ‘hands on’ workshop we will explore how ecosystems function and how to describe areas of our natural environment both on land and in the water.

‘Assessing Ecosystems’ involves surveying a site and recording information on vegetation, animals, soil and water quality.

Electives

In addition to the workshops 2 electives are available, you will need to complete 2 electives to cover the number of units required for a qualification in Certificate III Conservation and Land Management.

Electives are:
• Trim and cut felled trees (Chainsaw)
• Operate a 4x4 on unsealed roads (a manual licence is required)

Note: Alternative elective options may be available.

Remote Navigation

This workshop covers the skills and knowledge required to navigate in remote and trackless areas.

In the workshop you will learn how to:
• Read maps
• Use a compass
• Use a Geographical Positioning System (GPS)
